If Statement

Exercici 1

What will be the output of the following code:

```
if (5 < 4) {  
    echo "Hello";  
}  
echo ", my name is Linus"
```

Hello, my name is Linus

Hello

**** , my name is Linus**

Exercici 2

What will be the output of the following code:

```
$x = 4;  
if ($x > 4) {  
    echo "Hello";  
}  
echo ", my name is Linus"
```

Hello, my name is Linus

Hello

**** , my name is Linus**

Exercici 3

What will be the output of the following code:

```
$x = 5;  
if ($x > 4) {  
    echo "Hello";  
}  
echo ", my name is Linus"  
  
** Hello, my name is Linus  
  
Hello  
  
, my name is Linus
```

If Operators

Exercici 1

Consider the following code:

```
if ($x != 5) {  
    echo "Hello";  
}
```

What must the value of `$x` be to make the condition true?

5

5 or larger

5 or less

**** not 5**

Exercici 2

Fill in the missing part to make the condition true:

```
if (5 == 5) {  
    echo "Hello";  
}
```

Exercici 3

Fill in the missing part to check if 5 is larger than 2:

```
if (5 > 2) {  
    echo "Hello";  
}
```

If...Else

Exercici 1

What will be the output of the following code:

```
if (5 == 5 && 3 < 7) {  
    echo "Hello";  
} else {  
    echo "Good bye";  
}
```

**** Hello**

Good bye

Exercici 2

Output "Yes" if **\$a** is equal to **\$b**, otherwise output "No".

```
$a = 50;  
$b = 10;  
if ($a == $b) {  
    echo "Yes";  
} else {  
    echo "No";  
}
```

Exercici 3

Output "1" if **\$a** is equal to **\$b**, print "2" if **\$a** is greater than **\$b**, otherwise output "3".

```
$a = 50;  
$b = 10;  
if ($a == $b) {  
    echo "1";  
} elseif ($a > $b) {  
    echo "2";  
} else {  
    echo "3";  
}
```

Switch

Exercici 1

Which one is NOT a keyword used inside `switch` code blocks:

`break`

`default`

`** return`

`case`

Exercici 2

Create a `switch` statement that will output "Hello" if `$color` is "red", and "welcome" if `$color` is "green".

```
switch ($color) {  
  case "red":  
    echo "Hello";  
    break;  
  case "green":  
    echo "Welcome";  
    break;  
}
```

Exercici 3

Add a section that will output "Neither" if `$color` is neither "red" nor "green".

```
switch ($color) {  
  case "red":  
    echo "Hello";  
    break;  
  case "green":  
    echo "Welcome";  
    break;  
  default:  
    echo "Neither";  
}
```

Loops

Exercici 1

Which loop evaluates three expressions, one before the loop starts, one before each iteration, and one after each iteration?

`while`

`do...while`

**** for**

`foreach`

Exercici 2

Which loop is best for looping through the items of an array?

`while`

`do...while`

`for`

**** foreach**

Exercici 3

Which one of these loop types is not a legal loop type in PHP:

`while`

`for`

**** iterate**

While Loops

Exercici 1

Which statement is used to stop the loop in the middle of an iteration?

`stop;`

`end;`

` break;`**

Exercici 2

Output `$i` as long as `$i` is less than 6.

`$i = 1;`

```
while ($i < 6) {  
  echo $i;  
  $i++;  
}
```

Exercici 3

Which statement is used to stop the current iteration, and move on to the next iteration?

`stop;`

` continue;`**

`next;`

For Loops

Exercici 1

What will be the output of the following code:

```
for ($i = 0; $i < 5; $i++) {  
    echo $i;  
}
```

12345

**** 01234**

012345

Exercici 2

Create a loop that runs from 0 to 9.

```
for ($i = 0; $i < 10; $i++) {  
    echo $i;  
}
```

Exercici 3

Create a loop that runs from 0 to 9, but when it comes to 3, make it skip that iteration and move on to the next.

```
for ($x = 0; $x < 10; $x++) {  
    if ($x == 3) continue;  
    echo "The number is: $x";  
}
```

Foreach Loops

Exercici 1

What will be the output of the following code:

```
$colors = array('red', 'green', 'blue', 'yellow');  
foreach ($colors as $x) {  
    if ($x == 'green') continue;  
    echo $x;  
}
```

redgreenblueyellow

red

**** redblueyellow**

Exercici 2

Loop through the items in the `$colors` array.

```
$colors = array("red", "green", "blue", "yellow");
```

```
foreach ($colors as $x) {  
    echo $x;  
}
```

Exercici 3

Loop through the key and value pairs of the associative array:

```
$members = array("Peter"=>"35", "Ben"=>"37", "Joe"=>"43");
```

```
foreach ($members as $x => $y) {  
    echo "$x : $y";  
}
```
