# Arrays

## Exercici 1

What is a correct syntax for creating arrays in PHP?

```
$fruits = ('Apple', 'Banana', 'Orange');
```

```
$fruits['Apple', 'Banana', 'Orange'];
```

```
*** $fruits = array('Apple', 'Banana', 'Orange');
```

## Exercici 2

Use the correct function to output the number of items in an array.

```
$fruits = array("Apple", "Banana", "Orange");  
echo count($fruits);
```

## Exercici 3

True or False:

Array items must be of data type String.

True

```
*** False
```

# Indexed Arrays

## Exercici 1

In the following array:

```
$fruits = array('Apple', 'Banana', 'Orange');
```

What will be a correct syntax to change the second value from 'Banana' to 'Pineapple'?

```
*** $fruits[1] = 'Pineapple';
```

```
$fruits['Banana'] = 'Pineapple';
```

```
$fruits.replace('Banana', 'Pineapple');
```

## Exercici 2

Output the second item in the `$fruits` array.

```
$fruits = array("Apple", "Banana", "Orange");  
echo $fruits[1];
```

## Exercici 3

What will be the index of the new "Kiwi" item:

```
$fruits[0] = 'Apple';  
$fruits[3] = 'Banana';  
$fruits[6] = 'Orange';  
array_push($fruits, 'Kiwi');
```

1

```
*** 7
```

9

# Associative Arrays

## Exercici 1

What is a correct syntax for creating an associative array in PHP?

```
*** $car = array('brand'=>'Ford', 'model'=>'Mustang');
```

```
$car = array('brand'='Ford', 'model'='Mustang');
```

```
$car = array('brand': 'Ford', 'model': 'Mustang');
```

## Exercici 2

Create an associative array containing the age of Peter, Ben and Joe.

```
$age = array("Peter"=>"35", "Ben"=>"37", "Joe"=>"43");
```

## Exercici 3

Here you see an associative array. Output "age" of Ben.

```
$age = array("Peter"=>"35", "Ben"=>"37", "Joe"=>"43");  
echo "Ben is " . $age['Ben'] . " years old.";
```

## Exercici 4

Loop through an associative array and output the key and the value.

```
foreach($age as $x => $y) {  
    echo "Key=" . $x . ", Value=" . $y;  
}
```

# Create Arrays

## Exercici 1

Which is NOT a correct syntax to create an array?

```
$cars = array('Volvo', 'BMW', 'Toyota');
```

```
$cars = ['Volvo', 'BMW', 'Toyota'];
```

```
*** $cars = ('Volvo', 'BMW', 'Toyota');
```

## Exercici 2

Create an associative array containing the age of Peter, Ben and Joe.

```
$age = array("Peter"=>"35", "Ben"=>"37", "Joe"=>"43");
```

## Exercici 3

True or False:

A comma after the last array item is allowed.

```
*** True
```

False

# Access Arrays

## Exercici 1

For the following array:

```
$fruits = array('Apple', 'Banana', 'Orange');
```

What will be a correct syntax to access the second item ('Banana')?

```
$x = $fruits['Banana'];
```

```
*** $x = $fruits[1];
```

```
$x = $fruits[2];
```

## Exercici 2

For the following array:

```
$cars = array('brand' => 'Ford', 'year' => 1964);
```

What will be a correct syntax to return the 'year' value?

```
*** $x = $cars['year'];
```

```
$x = $cars[1];
```

```
$x = $cars[2];
```

## Exercici 3

Loop through an associative array and output the key and the value.

```
foreach($age as $x => $y) {  
    echo "Key=" . $x . ", Value=" . $y;  
}
```

# Update Arrays

## Exercici 1

What will the following array look like after the update:

```
$fruits = array('Apple', 'Banana', 'Orange');  
$fruits[1] = 'Kiwi';
```

```
('Kiwi', 'Banana', 'Orange');
```

```
*** ('Apple', 'Kiwi', 'Orange');
```

```
('Kiwi', 'Apple', 'Banana', 'Orange');
```

```
('Apple', 'Kiwi', 'Banana', 'Orange');
```

## Exercici 2

Consider the following array:

```
$age = array("Peter"=>"35", "Ben"=>"37");
```

Fill in the missing code to change the value of "Ben" from "37" to "47".

```
$age["Ben"] = "47";
```

## Exercici 3

Consider the following array:

```
$cars = array("Volvo", "Toyota", "Tesla");
```

Fill in the missing code to change the value of the first item to "Ford".

```
$cars[0] = "Ford";
```

# Add Array Items

## Exercici 1

For the following array:

```
$fruits = array('Apple', 'Banana', 'Orange');
```

What will be a correct syntax to add a new array item?

```
*** $fruits[] = 'Pineapple';
```

```
add_item($fruits, 'Pineapple');
```

```
$fruits.add_item('Pineapple');
```

## Exercici 2

What is a correct function to add an array item?

```
add_item()
```

```
array_add_item();
```

```
*** array_push();
```

## Exercici 3

What is a correct syntax for adding multiple items to an existing associative array?

```
*** $cars += ['color' => 'red', 'year' => 1964];
```

```
$cars['color' => 'red', 'year' => 1964];
```

```
$cars = ['color' => 'red', 'year' => 1964];
```

# Remove Array Items (bucar en w3schools)

## Exercici 1

What is a correct function for removing array items?

`array_remove()`

`array_unset()`

**\*\*\* `array_splice()`**

## Exercici 2

What will the array look like after the splice:  
`$fruits = array('Apples', 'Bananas', 'Cherries');`

`array_splice($fruits, 1, 2);`

`('Apples', 'Cherries')`

`('Bananas', 'Cherries')`

`('Apples', 'Bananas')`

**\*\*\* `('Apples')`**

## Exercici 3

What will the array look like after the shift:  
`$fruits = array('Apples', 'Bananas', 'Cherries');`

`array_shift($fruits);`

`('Apples', 'Bananas')`

**\*\*\* `('Bananas', 'Cherries')`**

`('Apples')`

# Sorting Arrays

## Exercici 1

What will the array look like after the sort:  
`$x = array('Pete'=>35, 'Ben'=>37, 'Joe'=>43);`  
`ksort($x);`

`('Pete'=>35, 'Ben'=>37, 'Joe'=>43)`

`('Joe'=>43, 'Pete'=>35, 'Ben'=>37)`

`*** ('Ben'=>37, 'Joe'=>43, 'Pete'=>35)`

## Exercici 2

Use the correct array method to sort the `$colors` array alphabetically.

```
$colors = array("red", "green", "blue", "yellow");  
sort($colors);
```

## Exercici 3

Use the correct array method to sort the `$colors` array descending alphabetically.

```
$colors = array("red", "green", "blue", "yellow");  
rsort($colors);
```

## Exercici 4

Use the correct array method to sort the `$age` array according to the *values*.

```
$age = array("Peter"=>"35", "Ben"=>"37", "Joe"=>"43");  
asort($age);
```
